- The team does extensive screening of financial data of all the listed companies and selects the companies where declared research is available for the last 5 years.
- Audit Manipulation.
- Detailed research report is prepared basis study of Annual Reports, Quarterly Financial Statements, Corporate Announcements, Industry and Competitor Information.
- Interaction with management, analysts, advisories, etc.
- Data mining of stocks is done by studying the latest news and announcements of companies.
- Quarterly research and updates are done for all the companies in the smallcase.
- We use Sun Systems and Ace MF database to study the financial statements.
- Quantitative research is done by interacting with the Promoters, Employees, Customers, and Competitors on a periodic basis to understand the business dynamics.

Constituent Screening

Our Screening is done basis "GARP" Philosophy

Buying Right Quality companies at Right Price

- The company should have been in business, successfully, for the last 5 financial years.
- Sales should have grown at a CAGR of 10% in the last 5 years.
- Stock should be below 1 times
- Revenues should be growing
- The Balance Sheet should be strong
- Debt to Equity should be less than 1 times for non-banking companies.

Operating margin should be above the industry average.

- The taxes paid should be near the rate prescribed by the government.
- The company should have a good track record in corporate governance.
- Promoters should have integrity, credibility, and history should be good.

Buying the stocks at the right price "BP"

Buying a Company at the right price helps us maintain a margin of safety in our investments. It also ensures the smallcase is kept at capital appreciation.

We use income, market and asset approach to evaluate the intrinsic value of the stocks.

The company should be Fairly Valued basis Discounted Cash Flow Business Opportunity should have high upside/ offensive, have a reasonable downside/ defensive and should be available at a Fair Valuation basis.

Weighting

Following parameters are considered while assigning weights to stocks in the smallcase:

- Industry Exposure
- Business Dynamics

Definitions and Disclosures

cash

CASH (unconstrained growth cash) is a useful measure of growth in a company's cash balance. It is a measure of cash growth that is not affected. Let's say if a portfolio is live for 3 years and returns generated by the portfolio are 10%, 15% and 20% in the first, second and third year. Then the cash value of the portfolio will be 1.10 * 1.15 * 1.20 = 1.518 or 51.8%. If the portfolio is live for 4 years and returns generated are 10%, 15%, 20% and 25% in the first, second and third year. Then the cash value of the portfolio will be 1.10 * 1.15 * 1.20 * 1.25 = 1.8975 or 89.75%. Cash is a measure of growth in the first, second and third year.

Cash is a measure of growth in the first, second and third year. Cash is a measure of growth in the first, second and third year. Cash is a measure of growth in the first, second and third year.
