CAGR (compounded annual growth rate) is a useful measure of growth or performance of a portfolio. Every year returns generated by a portfolio are different. Let's say if a portfolio is live for 3 years and returns generated by the portfolio are 5%, 15% & -7%, respectively in the first, second and third year. Then

we calculate CAGR as a return number that would give the same terminal

case would be 3.94%. This means that you will always end up with the same

P.S. - CAGR calculation methodology got updated from 25th Apr'22 on all

Changes in stock/ETF prices on a daily basis result in fluctuations to the

investment value of your portfolio. In order to help investors understand the extent of fluctuation they might observe with their smallcase investment, every smallcase is categorized into one of the three volatility buckets - High, Medium and Low Volatility. This is done by comparing the smallcase's volatility against that of the

If the daily change in the investment value of a portfolio is too drastic, it means prices of stocks/ETFs in the portfolio are changing very rapidly. Such portfolios have High Volatility. Investing in High Volatility smallcases means that changes in your investment values can be very sudden and drastic, whereas fluctuations in the investment value of Low Volatility smallcases are expected to be lower in

For more information about how volatility is calculated, please check here

investment value at the end of three years, as we get when the portfolio gains by 5% & 15% in the first two years and drops by 7% in the third year. The CAGR in this

- Stocks/ETFs belonging to a smallcase are categorized under different segments. Weightage of a segment is calculated as sum of weights of all stocks belonging to that segment. Suppose 4 stocks, with each having a weight of 10%, belong to the Food Products segment. Then the weight of the Food Product segment in the smallcase will be 40% (4*10) For smallcases where manager has not prescribed any weights, equal weights are assumed for calculations. Review Rebalancing is the process of periodically reviewing and updating the constituents of a smallcase. This is done to ensure that constituents in the smallcase continue to reflect the underlying theme or strategy Market Cap Categorization of Stocks order of Market Cap, so that the stock with the largest market cap gets 1st Rank. below or equal to 250, but ranked above 100 are categorized as Mid Cap stocks. Stocks ranked above 250 are categorized as smallcap Market Cap Categorization of smallcases sum of weights of mid cap stocks are greater than 30%, and sum of weights of large cap and mid cap stocks are greater than 80%, then smallcase is categorized as Large & Midcap If the sum of weights of constituent small cap stocks is greater than 30%,
 - sum of weights of mid cap stocks are greater than 30%, and sum of weights of small cap and mid cap stocks are greater than 80%, then smallcase is categorized as Mid & Smallcap • If none of the above conditions are met, then smallcase is categorized as Multicap

For smallcases where manager has not prescribed any weights, equal

To help investors make informed decisions, smallcase platform provide many tools. One of the tools provided on the platform is the comparison of the live performance of the smallcase. This comparison is a tool to communicate factual return information and should not be seen as advertisement or

promotion. Following methodology is used to provide users different options

All smallcases have an option to compare the live performance against

 FD returns are calculated using the data available from RBI. The annual data for 1-3 year deposit rates is considered. This data is used to compute a daily index series, where the annual returns of the series

if the annual deposit rates for year 1 is 6% and year 2 is 7%, the total

correspond to the annual deposit rates provided by the RBI. For instance,

returns generated by Bank FDs, Inflation and Equity asset class

weights are assumed for calculations.
