Methodology

Defining the universe

- Multi Cap Investment Strategy
- Maximum 15 Stocks
- Benchmark - NIFTY 500
- Initial 6% Allocation In each stock (15x6=90)
- Rest 10% will be allocated in Pyramiding in existing companies
- Liquid money will be invested in Liquid Bees
- No Sector Specific Approach, NO Minimum Portfolio Investment Approach

Research

We Believe to keep the Stock Selection process on Answering the 5 Questions, which are most important to answer before entering investments:

- What to Buy?
Answer: P.P.P. (Price, Profits & People)
(Selection is based on Technical, Fundamental & Understanding the business in deep)
- How Much to Buy?
Answer: Maximum 15 Companies – 6% Allocation to Each.
- When to Buy?
Answer: Lollapalooza effect
- When to Exit?
Answer: Our Exits are Predefined before we enter (Exits are based on Price and Performance)
- When to Pyramid?
Answer: Pyramiding will be done when stock outperforms, we will Allocate 10% of the fund in companies as per opportunity

Our Selection is 90% Science and 10% Art, to make it so process driven and Emotional Less, that it is a every season and market Portfolio which can create wealth for all small case investors.

Definitions and Disclosures

CAGR

CAGR (compounded annual growth rate) is a useful measure of portfolio or performance of a portfolio. Every year returns generated by a portfolio are different. Let's say if a portfolio is live for 3 years and returns generated by the portfolio are 5%, 15% & -7%, respectively in the first, second and third year. Then we calculate CAGR as a return number that would give the same terminal investment value at the end of three years, as we get when the portfolio gains by 5% & 15% in the first two years and drops by 7% in the third year. The CAGR in this case would be 3.94%. This means that you will always end up with the same investment value at the end of the third year, if your portfolio gains by 3.94% every year or 5%, 15% and -7%, respectively in the first, second and third year.

In simple words, it indicates the annual return generated by the smallcase from the date of launch. For smallcases live for less than 1 year, absolute returns in the applicable time period are shown. Only live data is provided for all calculations. Returns and CAGR numbers don't include backtested data.

P.S. - CAGR calculation methodology got updated from 25th Apr'22 on all smallcase Platforms. Please read [this post](#) to understand the changes in detail

Volatility Label

Changes in stock/ETF prices on a daily basis result in fluctuations to the investment value of your portfolio. In order to help investors understand the extent of fluctuation they might observe with their smallcase investment, every smallcase is categorized into one of the three volatility buckets - High, Medium and Low Volatility. This is done by comparing the smallcase's volatility against that of the Nifty 100 Index.

If the daily change in the investment value of a portfolio is too drastic, it means prices of stocks/ETFs in the portfolio are changing very rapidly. Such portfolios have High Volatility. Investing in High Volatility smallcases means that changes in your investment values can be very sudden and drastic, whereas fluctuations in the investment value of Low Volatility smallcases are expected to be lower in comparison.

For more information about how volatility is calculated, please check [here](#)

Segment

Stocks/ETFs belonging to a smallcase are categorized under different segments. Weightage of a segment is calculated as sum of weights of all stocks belonging to that segment. Suppose 4 stocks, with each having a weight of 10%, belong to the Food Products segment. Then the weight of the Food Product segment in the smallcase will be 40% (4*10)

For smallcases where manager has not prescribed any weights, equal weights are assumed for calculations.

Review

Rebalancing is the process of periodically reviewing and updating the constituents of a smallcase. This is done to ensure that constituents in the smallcase continue to reflect the underlying theme or strategy

Market Cap Categorization of Stocks

All the stocks listed on NSE(National Stock Exchange) are arranged in decreasing order of Market Cap, so that the stock with the largest market cap gets 1st Rank. Stocks ranked equal to or below 100 are categorized as Large Cap. Stocks ranked below or equal to 250, but ranked above 100 are categorized as Mid Cap stocks. Stocks ranked above 250 are categorized as smallcap

Market Cap Categorization of smallcases

- If the sum of weights of constituent large cap stocks is greater than 50%, then smallcase is categorized as Largecap
- If the sum of weights of constituent mid cap stocks is greater than 50%, then smallcase is categorized as Midcap
- If the sum of weights of constituent small cap stocks is greater than 50%, then smallcase is categorized as Smallcap
- If the sum of weights of constituent large cap stocks is greater than 30%, sum of weights of mid cap stocks are greater than 30%, and sum of weights of large cap and mid cap stocks are greater than 80%, then smallcase is categorized as Large & Midcap
- If the sum of weights of constituent small cap stocks is greater than 30%, sum of weights of mid cap stocks are greater than 30%, and sum of weights of small cap and mid cap stocks are greater than 80%, then smallcase is categorized as Mid & Smallcap
- If none of the above conditions are met, then smallcase is categorized as Multicap

For smallcases where manager has not prescribed any weights, equal weights are assumed for calculations.

Comparison of live performance

To help investors make informed decisions, smallcase platform provide many tools. One of the tools provided on the platform is the comparison of the live performance of the smallcase. This comparison is a tool to communicate factual return information and should not be seen as advertisement or promotion. Following methodology is used to provide users different options to compare the performance of the smallcases

- All smallcases have an option to compare the live performance against returns generated by Bank FDs, Inflation and Equity asset class
 - FD returns are calculated using the data available from **RBI**. The annual data for 1-3 year deposit rates is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual deposit rates provided by the RBI. For instance, if the annual deposit rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as $1*(1+6%)*(1+7%) - 1 = 13%$. This series is also utilised to determine the CAGR between any 2 specified dates
 - Inflation returns are calculated using the data available from **IMF**. The annual percent change in average consumer prices is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual inflation rates provided by the IMF. For instance, if the annual inflation rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as $1*(1+6%)*(1+7%) - 1 = 13%$. This series is also utilised to determine the CAGR between any 2 specified dates
 - Equity returns represent the returns generated by Nifty 50 Index
- All smallcases have an option to compare the live performance against the returns generated by Equity Largecap section of the market - represented by Nifty100 index
- Each smallcase is categorized into one of the market cap categories using the methodology explained in the section above. Following options are made available, as per the marketcap category of the smallcase

Market Cap Category	Comparable Option
Largecap	Nifty 100
Midcap	Nifty Midcap 150
Smallcap	Nifty Smallcap 100
Large & Midcap	Nifty LargeMidcap 250
Mid & Smallcap	Nifty MidSmallcap 400
Multicap	Nifty 500
